Tags Services

- Extract/Skim Service (Athenaeum)
  - started as sync. (interactive), after request migrated to assync., but switch still exists and could be reanimated
  - all interactions with other services via XML files carrying all arguments + profiling data
  - if migration to Hadoop/HBase – most of it could be put inside (=> simplification/speeding up)
  - clients + Manager (@J2EE - portable) + Workers (the only "native" component)
    - two CLI: extract/skim, amanager
    - portable GUI/CLI (works anywhere, also on Android)
- Aux services
  - logging (from E.Vinek)+ log analyses (by Justin)
  - Service Catalog (with HBase backend) to handle services configuration and interconnections
  - Histo service
